RAKA LinkedIn & LinkedIn Page Postiz Setup Guide

Step-by-Step Developer Portal Configuration, 7-Scope Verification, and .env Formatting for RAKA's Existing LinkedIn Company Page

1. How Postiz Connects LinkedIn & LinkedIn Page (And Why Errors Occur)

Since your **RAKA** (raka.pk) LinkedIn Company Page is already created and active, you only need to register a single LinkedIn Developer App, link and verify it with the RAKA Company Page, unlock all 7 mandatory OAuth 2.0 scopes, and map its credentials to `LINKEDIN_CLIENT_ID` and `LINKEDIN_CLIENT_SECRET`. According to the Postiz Provider API Keys Overview, LinkedIn Guide, and LinkedIn Page Guide, connection failures happen for four main reasons:

- **Both Channels Share One Credential Pair:** Postiz has two separate LinkedIn buttons in the **Add Channel** modal—**LinkedIn** (for personal profiles) and **LinkedIn Page** (for RAKA's Company Page)—but both read the exact same `LINKEDIN_CLIENT_ID` and `LINKEDIN_CLIENT_SECRET` environment variables.
- **Two Distinct OAuth Redirect URIs Required:** Even though both channels share the same Client ID and Secret, they redirect to two different callback endpoints (`/integrations/social/linkedin` and `/integrations/social/linkedin-page`). Both URLs must be added to your LinkedIn App's **Authorized redirect URLs** list.
- **Silent Scope Dropping & `NotEnoughScopes` Error:** During OAuth login, Postiz requests all 7 scopes (`openid`, `profile`, `w_member_social`, `r_basicprofile`, `rw_organization_admin`, `w_organization_social`, `r_organization_social`) for *both* personal and page connections. If your LinkedIn App has not been granted all three products—specifically the **Advertising API**—LinkedIn does not fail the login screen; instead, it silently issues a token missing the organization scopes, and Postiz immediately rejects the connection with `NotEnoughScopes`.
- **"Bummer, something went wrong" / Invalid Client ID Error:** If `LINKEDIN_CLIENT_ID` is missing from `.env`, contains quotes/spaces errors, or Postiz has not been restarted since editing `.env`, clicking LinkedIn Page sends an invalid or empty `client_id` parameter to LinkedIn's OAuth server.

RAKA Channel in Postiz UI	Postiz .env Variable Pair	OAuth 2.0 Redirect URI (Local Port 4200)	Required LinkedIn App Products
LinkedIn Page (RAKA Company Page)	`LINKEDIN_CLIENT_ID` `LINKEDIN_CLIENT_SECRET`	`http://localhost:4200/integrations/social/linkedin-page`	1. Share on LinkedIn 2. Sign In with LinkedIn using OpenID Connect 3. Advertising API
LinkedIn (Personal Profile)	`LINKEDIN_CLIENT_ID` `LINKEDIN_CLIENT_SECRET`	`http://localhost:4200/integrations/social/linkedin`	Shares the exact same LinkedIn App and all 3 products / 7 scopes

2. Step-by-Step LinkedIn Developer Portal Setup for RAKA

Step 2.1: Create the RAKA App in LinkedIn Developers

1. Sign in to the LinkedIn Developer Portal using the LinkedIn account that has **Super Admin** access to the existing **RAKA** LinkedIn Company Page.
2. Click **Create app** and complete the required fields:
   - **App name:** `RAKA Social Publishing` (or `RAKA Postiz`)
   - **LinkedIn Page:** Search for and select your existing **RAKA** Company Page (you can also paste the full LinkedIn URL of the RAKA page).
   - **Privacy policy URL:** `https://raka.pk/policies/privacy-policy` (or your live privacy policy URL on raka.pk)
   - **App logo:** Upload the RAKA square brand logo (minimum 100×100 px).
3. Check the box to agree to the API Terms of Use and click **Create app**.

Step 2.2: Verify the RAKA Company Page Association (Mandatory)

LinkedIn will not unlock organization scopes or approve the Advertising API until your app is verified by a Super Admin of the RAKA LinkedIn Page (Postiz LinkedIn Page Setup):

1. Inside your newly created app, click the **Settings** tab.
2. Next to **LinkedIn Page** (showing RAKA), click the **Verify** button.
3. Click **Generate URL** in the modal that appears.

4. Copy and open that verification URL in your browser (while logged in as the RAKA Page Super Admin) and click **Verify** / **Approve**.
5. Refresh the **Settings** tab in the LinkedIn Developer Portal and confirm a green **Verified** badge appears next to the RAKA Page.

Step 2.3: Enable All Three Required Products & Map the 7 Scopes

Click the **Products** tab at the top of your LinkedIn App dashboard. You must request access to **all three** of the following products so your app receives all 7 required OAuth 2.0 scopes (Postiz LinkedIn Scope Reference):

LinkedIn Product to Request	OAuth 2.0 Scopes Granted	Approval & Requirement Notes
1. Sign In with LinkedIn using OpenID Connect	`openid` `profile`	Click **Request access**. Usually provisioned automatically within a few seconds.
2. Share on LinkedIn	`w_member_social`	Click **Request access**. Usually provisioned automatically within a few seconds.

3. Advertising API *(Crucial for LinkedIn Page & Token Refresh)*	`r_basicprofile`
	`rw_organization_admin`
	`w_organization_social`
	`r_organization_social`
		Click **Request access**. LinkedIn will present an access request form in the portal. Fill out the form with RAKA's website (`https://raka.pk`) and internal social publishing use case. Without **Advertising API**, you cannot publish to RAKA's Company Page or refresh access tokens.

Step 2.4: Audit the 7 Scopes Under the "Auth" Tab

1. Once all three products are active under *Products → Added products*, click the **Auth** tab at the top of your app.
2. Scroll down to the **OAuth 2.0 scopes** box at the bottom of the page.
3. Confirm that **every single one of these 7 scopes** is explicitly listed in that box before attempting to connect in Postiz:

   ```
   openid, profile, w_member_social, r_basicprofile, rw_organization_admin, w_organization_social, r_organization_social
   ```

   Important: If the four organization/profile scopes (`r_basicprofile`, `rw_organization_admin`, `w_organization_social`, `r_organization_social`) do not appear in the **OAuth 2.0 scopes** list yet, your **Advertising API** product request is still pending approval. Connecting before they appear will trigger a `NotEnoughScopes` error in Postiz.

Step 2.5: Register OAuth 2.0 Redirect URLs

1. Stay on the **Auth** tab and locate the **OAuth 2.0 settings** card in the middle of the page.
2. Click the pencil icon next to **Authorized redirect URLs for your app**, click **+ Add redirect URL**, and add **both** Postiz endpoints matching your `FRONTEND_URL="http://localhost:4200"` (with no trailing slashes):

   ```
   http://localhost:4200/integrations/social/linkedin-page
   http://localhost:4200/integrations/social/linkedin
   ```

   (If you also run Postiz on Docker port 5000 or a production RAKA domain, add `http://localhost:5000/integrations/social/linkedin-page`, `http://localhost:5000/integrations/social/linkedin`, `https://social.raka.pk/integrations/social/linkedin-page`, and `https://social.raka.pk/integrations/social/linkedin`).
3. Click **Update** to save the redirect URLs.

Step 2.6: Copy LINKEDIN_CLIENT_ID & LINKEDIN_CLIENT_SECRET

1. At the top of the **Auth** tab, locate the **Application credentials** card.
2. Copy the 14-character alphanumeric **Client ID** (e.g., `77xxxxxxxxxxxx`).
3. Click the eye icon next to **Primary Client Secret** (or **Client Secret**) and copy the secret string (often prefixed with `WPL_AP1...`).
4. Paste both into your Postiz `.env` file under `LINKEDIN_CLIENT_ID` and `LINKEDIN_CLIENT_SECRET`.

---

3. Formatted Postiz .env Configuration for RAKA

Update your Postiz `.env` file (Postiz Configuration Reference) with the exact block below. Ensure there are no spaces around the = sign, no trailing spaces inside the quotation marks, and that `FRONTEND_URL` matches the exact hostname and port you open in your browser:

```
# Configuration reference: https://docs.postiz.com/self-host/configuration/reference

# === Required Settings
DATABASE_URL="postgresql://postiz-user:postiz-password@localhost:5432/postiz-db-local"
REDIS_URL="redis://localhost:6379"
JWT_SECRET="random string for your JWT secret, make it long"

# === This needs to be exactly the URL you're accessing Postiz on
FRONTEND_URL="http://localhost:4200"
```

```
NEXT_PUBLIC_BACKEND_URL="http://localhost:3000"
BACKEND_INTERNAL_URL="http://localhost:3000"

STORAGE_PROVIDER="local"

# ------------------------------------------------------------------------
# 2. LINKEDIN & LINKEDIN PAGE — Shared for both Personal & Page integrations
#    Source: LinkedIn Developer Portal -> Auth Tab -> Application credentials
#    Required OAuth 2.0 Scopes (All 7 must appear under Auth -> OAuth 2.0 scopes):
#      openid, profile, w_member_social, r_basicprofile,
#      rw_organization_admin, w_organization_social, r_organization_social
#    Authorized Redirect URLs:
#      http://localhost:4200/integrations/social/linkedin
#      http://localhost:4200/integrations/social/linkedin-page
# ------------------------------------------------------------------------
LINKEDIN_CLIENT_ID="your_linkedin_client_id"
LINKEDIN_CLIENT_SECRET="your_linkedin_client_secret"
```

4. Connecting RAKA's LinkedIn Page in Postiz & Troubleshooting

1. **Restart Postiz:** Because Postiz reads environment variables only at startup, restart your backend and orchestrator processes (or run `docker compose up -d --force-recreate`) after saving `.env`.
2. **Open Postiz in a Clean Browser Tab:** Navigate to `http://localhost:4200` (never mix `127.0.0.1` and `localhost`, and pause ad/cookie blockers so the OAuth `state` cookie is preserved).
3. **Add the LinkedIn Page Channel:** Click **Add Channel → LinkedIn Page**. Log in with your LinkedIn Super Admin account, click **Allow** on the LinkedIn consent screen, and select the **RAKA** Company Page from the page selector dialog in Postiz.
4. **Bonus — Posting Multi-Image PDF Carousels on LinkedIn Page:** Per the Postiz LinkedIn Page Documentation, LinkedIn is the only platform where Postiz supports PDF document-carousel posts. When you attach multiple images to a RAKA LinkedIn Page post in Postiz, Postiz automatically merges your images into a swipeable PDF carousel on LinkedIn.

Error / Symptom	Root Cause	Exact Fix
`NotEnoughScopes` error after LinkedIn redirects back to Postiz	One or more of the 7 scopes (usually the 4 **Advertising API** scopes) are missing from the *Auth → OAuth 2.0 scopes* list.	Open *Products* in your LinkedIn App, ensure **Advertising API**, **Share on LinkedIn**, and **Sign In with LinkedIn using OpenID Connect** are all approved, and verify all 7 scopes appear under the *Auth* tab.
"Bummer, something went wrong" or **Invalid Client ID / Redirect URI** on LinkedIn	`LINKEDIN_CLIENT_ID` wasn't loaded (container not restarted) or the Redirect URI in LinkedIn's *Auth* tab doesn't match `http://localhost:4200/integrations/social/linkedin-page`.	Restart Postiz after saving `.env`, and verify that `http://localhost:4200/integrations/social/linkedin-page` is listed under *Auth → OAuth 2.0 settings → Authorized redirect URLs* with no trailing slash.
RAKA Company Page does not appear in the Postiz selection modal after authorizing	The LinkedIn user account that authorized the OAuth prompt is not a designated **Super Admin / Content Admin** of the RAKA Company Page, or the app isn't verified.	Ensure your personal LinkedIn account is listed as a **Super Admin** on the RAKA LinkedIn Page and that the green **Verified** badge is active under *Settings → LinkedIn Page* in the Developer Portal.
"Invalid state" flash message in Postiz	Browser dropped the CSRF session cookie during the redirect between `localhost:4200` and `linkedin.com`.	Access Postiz strictly via `http://localhost:4200` in a normal (non-incognito) browser window with Brave Shields / privacy extensions disabled (OAuth Connect Troubleshooting).
