RAKA Pinterest (rakacosmetic) Postiz Setup Guide

Step-by-Step Developer Portal Configuration, Business Account Verification, and .env Formatting for RAKA's Existing Pinterest Profile

1. How Postiz Connects RAKA's Pinterest Channel & Why Errors Occur

Since your **RAKA** (raka.pk) Pinterest account (pinterest.com/rakacosmetic) is already created and set up, integrating it with Postiz requires registering an app inside the Pinterest Developer Dashboard and mapping its credentials to `PINTEREST_CLIENT_ID` and `PINTEREST_CLIENT_SECRET`. According to the Postiz Pinterest Setup Guide and Provider API Keys Overview, connection errors (such as **"Invalid App ID"**, **"client_id is invalid"**, or **"Redirect URI mismatch"**) happen for four primary reasons:

- **Account Must Be a Pinterest Business (Company) Account:** Pinterest only grants Developer Portal and API publishing access to **Business Accounts** (Postiz Pinterest Guide). If `@rakacosmetic` is currently a personal profile, you can convert it to a free Business account in two clicks under Pinterest Account Settings without losing any existing boards or Pins.
- **Trial (Sandbox) vs. Standard Access Behavior:** When you first submit a Pinterest app, Pinterest approves it for **Trial access** first. Under Trial access, you can connect `@rakacosmetic` in Postiz immediately, fetch your boards, and schedule Pins—however, Pins created by a Trial app are saved in **Sandbox mode (visible only to you)** until your app is upgraded to **Standard access** for public publishing.
- **Unloaded `PINTEREST_CLIENT_ID` or App Pending Initial Review:** Postiz displays Pinterest in the **Add Channel** dialog even when `PINTEREST_CLIENT_ID` is empty. If you click Pinterest before restarting Postiz—or before your Pinterest app status changes from *In Review* to *Trial / Active*—Pinterest rejects the OAuth screen with an invalid client/app ID error.
- **Exact Redirect URI Matching:** Pinterest's OAuth 2.0 server requires an exact character-for-character match against your `FRONTEND_URL` (`http://localhost:4200/integrations/social/pinterest`) with no trailing slash.

RAKA Channel in Postiz UI	Postiz .env Variable Pair	Exact Pinterest Portal Field Name	OAuth 2.0 Redirect URI (Local Port 4200)
Pinterest (@rakacosmetic)	`PINTEREST_CLIENT_ID` `PINTEREST_CLIENT_SECRET`	**App id** (numeric string) **App secret key** (hex/alphanumeric string)	`http://localhost:4200/integrations/social/pinterest`

---

2. Step-by-Step Pinterest Developer Portal Setup for RAKA

Step 2.1: Verify @rakacosmetic Is a Business Account & Claim raka.pk

1. Log in to pinterest.com/rakacosmetic.
2. Click the top-right chevron icon → **Settings → Account management**.
3. Under **Account type**, confirm it says **Business account**. If it says Personal, click **Convert to a business account** (free and instant), set the Business Name to `RAKA`, and set the Website to `https://raka.pk`.
4. *Recommended:* Under **Settings → Claimed external accounts**, verify that `raka.pk` is claimed and that you have at least **one public Board** created on `@rakacosmetic` (Postiz requires selecting a target board whenever you schedule a Pin, per Postiz Pinterest Settings).

Step 2.2: Create & Submit the RAKA App in Pinterest Developers

1. While logged into `@rakacosmetic`, open the Pinterest Developer Dashboard and click **Connect app** (or **Create app**).
2. Complete the application details form so Pinterest approves your app quickly:
   - **App name:** `RAKA Social Publishing` (avoid using the word "Pinterest" in your app name, as Pinterest's review guidelines prohibit it)
   - **Company name:** RAKA

- **Company website or link to app:** `https://raka.pk`
- **Privacy Policy link:** `https://raka.pk/policies/privacy-policy`
- **App purpose / Developer type:** Select *"I am developing an app for my own organization / internal business use"*
- **Use case description:** Enter a concise description such as: *"Internal social media management integration (Postiz) for RAKA (raka.pk) to schedule and publish original brand product photography and educational hair-care Pins to our official @rakacosmetic Pinterest Business boards."*

3. Agree to the Pinterest Developer Terms and click **Submit**. Wait for Pinterest to approve your app for **Trial access** (typically granted within a few hours to 1–2 business days).

Step 2.3: Add the Postiz OAuth 2.0 Redirect URI (Crucial: Press Enter!)

1. Once your app card appears in My Apps, click **Manage** on the RAKA app.
2. Scroll down to the **Configure** section and locate the **Redirect URIs** input box.
3. Type or paste the exact Postiz callback URL matching your `FRONTEND_URL="http://localhost:4200"` (Postiz Redirect URI Reference):

   ```
   http://localhost:4200/integrations/social/pinterest
   ```

   (If you run Postiz via Docker on port 5000, also add `http://localhost:5000/integrations/social/pinterest`; if hosted on a live RAKA domain, add `https://social.raka.pk/integrations/social/pinterest`).
4. **Crucial Portal UI Step:** After pasting the URL into the **Redirect URIs** box, you **must press `Enter`** (or click the **Add** button next to the input) so the URL appears as a saved chip/entry below the box, and then click **Save**. If you only paste the URL without pressing `Enter`, Pinterest discards it and returns a Redirect URI error during login.

Step 2.4: Copy the App ID & App Secret Key

1. At the top of your RAKA app management page in the Pinterest Developer Dashboard, locate the credentials block:
   - Copy the numeric **App id** (e.g., `150xxxxxxxxxxx`) → this maps to `PINTEREST_CLIENT_ID`.
   - Next to **App secret key**, click **Show** and copy the full hexadecimal secret string → this maps to `PINTEREST_CLIENT_SECRET`.
2. Paste both values into your Postiz `.env` file.

Step 2.5: Upgrade from Trial Access to Standard Access (For Public Pins)

Once you connect `@rakacosmetic` in Postiz using your Trial credentials and publish 1–2 test Pins, you can unlock public Pin visibility by requesting **Standard access** inside your app's management page:

1. Record a brief 30–60 second screen recording showing yourself clicking **Add Channel → Pinterest** in Postiz, authorizing on Pinterest's OAuth consent screen, and creating a Pin on a RAKA board.
2. Inside your Pinterest App page, click **Request Standard Access**, attach the screen recording link, and submit. Once approved, all Pins published from Postiz to `@rakacosmetic` are immediately public.

---

3. Formatted Postiz .env Configuration for RAKA Pinterest

Add the Pinterest credential block to your Postiz `.env` file (Postiz Configuration Reference). Ensure there are no spaces around the = sign, no trailing whitespace inside the quotes, and that `FRONTEND_URL` matches the exact address you use in your browser:

```
# Configuration reference: https://docs.postiz.com/self-host/configuration/reference

# === Required Settings
DATABASE_URL="postgresql://postiz-user:postiz-password@localhost:5432/postiz-db-local"
REDIS_URL="redis://localhost:6379"
JWT_SECRET="random string for your JWT secret, make it long"

# === This needs to be exactly the URL you're accessing Postiz on
FRONTEND_URL="http://localhost:4200"
NEXT_PUBLIC_BACKEND_URL="http://localhost:3000"
BACKEND_INTERNAL_URL="http://localhost:3000"
```

```
STORAGE_PROVIDER="local"

# ========================================================================
# PINTEREST — Pinterest App ID & Secret (@rakacosmetic)
# Source: Pinterest Developer Dashboard (developers.pinterest.com/apps)
#   - PINTEREST_CLIENT_ID     = "App id" (numeric string)
#   - PINTEREST_CLIENT_SECRET = "App secret key" (click Show to copy)
# Redirect URI (remember to press Enter after typing in Pinterest portal):
#   http://localhost:4200/integrations/social/pinterest
# ========================================================================
PINTEREST_CLIENT_ID="your_pinterest_app_id"
PINTEREST_CLIENT_SECRET="your_pinterest_app_secret"
```

4. Connecting @rakacosmetic in Postiz & Troubleshooting

1. **Restart Postiz:** Because Postiz reads environment variables only at boot, restart your backend and orchestrator processes (or run `docker compose up -d --force-recreate`) after saving `.env`.
2. **Authorize in Postiz:** Open `http://localhost:4200` in a standard browser window (where you are signed in to pinterest.com/rakacosmetic), click **Add Channel → Pinterest**, and click **Give access** on the Pinterest OAuth screen.
3. **Select a Board When Scheduling RAKA Pins:** Per Postiz Pinterest Settings, every Pinterest post requires selecting a destination **Board** from the Postiz right-hand settings panel, along with an optional Pin Title (up to 100 characters) and destination link (e.g., `https://raka.pk`).

Error / Symptom	Root Cause	Exact Fix
"Invalid App ID" / "client_id is invalid or not active" on Pinterest OAuth screen	`PINTEREST_CLIENT_ID` wasn't loaded (Postiz not restarted), contains extra spaces, or the Pinterest App is still awaiting initial Trial approval.	Verify your app status is **Trial / Active** in Pinterest Developers, confirm `PINTEREST_CLIENT_ID` contains the numeric **App id**, and restart Postiz.
"Redirect URI does not match" error on Pinterest	The URL was pasted into the Pinterest *Redirect URIs* box without pressing `Enter` to register it, or has a trailing slash.	In your Pinterest App settings, paste `http://localhost:4200/integrations/social/pinterest`, press `Enter` so it saves as a list item, and click **Save**.
No Boards appear in the Postiz Pin composer dropdown	The `@rakacosmetic` account has no boards created yet, or only secret/archived boards exist.	Create at least one public board on pinterest.com/rakacosmetic (e.g., *RAKA Hair Care & Rituals*) and refresh the Postiz composer.
"Invalid state" flash error after Pinterest redirects back to Postiz	Browser dropped the session CSRF cookie during the redirect between `localhost:4200` and `pinterest.com`.	Access Postiz strictly via `http://localhost:4200` in a non-incognito window with Brave Shields / ad-blockers paused (OAuth Connect Troubleshooting).
